

EXECUTIVE REPORT

SWIGGY SALES PERFORMANCE

DASHBOARD

Converting Raw Transactional Logistics into Interactive, Enterprise-Grade Business Insights

Detail	Information
Prepared By	Aditya Vishwakarma
Role	Aspiring Data / Business Analyst
Target Audience	Hiring Managers & Recruitment Panels – Data/Business Analyst Roles
Records Analyzed	1,97,430 Transactions
Tool Used	Microsoft Excel (Advanced Dashboarding)

1. Strategic Executive Summary

In the hyper-competitive food-technology landscape, real-time data accessibility is the primary differentiator between reactive choices and proactive market scaling. This project engineered an end-to-end analytical dashboard that translates over 1.97 lakh raw transactional logs spanning multiple Indian states into a cohesive, zero-overhead strategic sandbox.

Core Financial & Operational Health (KPI Scope)

₹5.30 Cr Total Consolidated Sales	1.97 Lakh Total Order Fulfillments	₹268.51 Average Order Value	4.34 / 5 Avg. Customer Rating
---	--	---------------------------------------	---

Metric	Value
Total Consolidated Sales	₹5,30,12,506
Total Order Fulfillments	1,97,430 Orders
Average Order Value (AOV)	₹268.51
Platform Average Customer Rating	4.34 / 5.00
Total Rating Count Volume	55,91,574 Ratings

2. The Business Challenge & Project Goals

The Challenges Addressed

- High Data Volume — processing millions of data points across fractured regional distributions and expansive culinary menus.
- Operational Data Silos — isolated spreadsheets masked critical patterns in peak order times, regional shortfalls, and dietary transitions.
- Immediate Management Needs — the C-suite required an accessible visual interface, free of clutter, to make swift operational decisions.

Our Core Strategic Milestones

- Unified KPI Views — instant clarity across Sales, Order Volume, and Rating Health.
- Visual Granularity — 6+ interconnected visual components for deep-dive product and market exploration.
- Responsive Client Slicers — fully interactive interface enabling cross-filtering by Timeframe, State, Dietary Selection, and Menu Category.

3. Underlying Architecture & Data Transformation Blueprint

Data Architecture Blueprint

Target Field	Content Scope	Sample Record
State / City	Regional demographics of the delivery area	Karnataka / Bengaluru
Order Date	Temporal marker for tracking seasonality	12-05-2025
Restaurant / Dish	Merchant identifier and itemized menu details	KFC / Hot & Crispy Chicken
Food Type	Dietary classification (essential segment)	Veg / Non-Veg
Price / Rating	Financial value, satisfaction score, density	₹299.00 / 4.33 Stars / 0.08M

The 3-Step ETL Pipeline

- CSV Integration — raw transactional logs structured and scrubbed inside Excel to ensure structural validation.
- Structured Table Normalization — raw cell matrices converted into an indexed database schema, Swiggy_Data, using structured table identifiers.
- Dynamic Scaling — database foundation designed so all pivot models and downstream charts scale instantly as new transaction batches are appended.

Advanced Engineering: Time-Series Transformation Formulas

Month Analysis

=TEXT(Order_Date, "mmm") — Extracts high-revenue operational months.

Weekday Analysis

=TEXT(Order_Date, "ddd") — Maps weekday vs. weekend sales performance shifts.

Quarterly Aggregation

="Q" & ROUNDUP(MONTH(Order_Date)/3,0) — Clusters dates into business quarters for executive evaluation.

4. Data Model Strategy & Advanced Formula Logic

KPI Logic Map

KPI	Formula	Purpose
Total Sales	SUM(Price)	Validates gross transaction revenue
Total Orders	COUNT(State / Order ID)	Monitors volume overhead and supply-chain load
Average Order Value (AOV)	AVERAGE(Price)	Evaluates cart-building success and spend limits
Avg. Customer Rating	AVERAGE(Rating)	Tracks consumer retention and service benchmarks

The "Dynamic Bypass" via Advanced Formulas

The Problem

Standard Excel chart layers do not naturally connect dynamically to pivot slicers without manual update delays or visual breaks.

The Solution

Implemented an enterprise-level matrix workaround using a mirror range driven by OFFSET and COUNTA: =OFFSET(U3, 0, 0, COUNTA(U:U)-1, 2)

Strategic Impact: bypasses default reporting limitations, locking interactive data updates seamlessly across all visualizations whenever filters are toggled.

5. User Interface (UI) Design & Layout Workflow

The UI utilizes a modern Orange-and-White brand theme designed to reflect Swiggy's corporate identity while presenting text with high contrast and readability.

Dashboard Layout Blueprint

Zone	Content
Top Band	Swiggy logo + KPI cards: Total Sales, Total Orders, Avg Order Value, Avg Rating
Left Sidebar	Filters — Month, Food Type, State, Category
Center-Left	Monthly Performance Trends (May / Aug peaks identified)
Center-Right	Geographic Distribution Map (Bengaluru market dominance)

Zone	Content
Mid-Left	Daily Peak Trends (Saturday revenue spike)
Mid-Right	Top 10 Food Brand Treemap (KFC & McDonald's lead)
Bottom Band	Quarterly Performance Matrix + Regional Top 5 Cities Bar Chart

Design Workflow

- Canvas Prep — balanced, light-bordered perimeter grid with a tailored sidebar for dashboard slicers.
- Wireframing — curved background containers to house separate analytical focal points cleanly.
- Alignment — standardized spacing across KPI cards, line elements, and spatial maps to prevent visual fatigue.
- Asset Locking — fixed graphical layouts to insulate structural visuals from accidental formula shifts or scaling bugs.

6. Strategic Deep-Dive: Core Business Insights

Temporal Trends & Revenue Seasonality

The Saturday Revenue Surge

Daily performance vectors show Saturdays as peak revenue generators, reaching individual daily highs of ₹77,82,935 — while Mondays and Tuesdays show consumer order fatigue.

Monthly Scale

Total revenue peaked in May (₹67,93,558) and held stable through August (₹67,91,462), establishing a verified baseline for summer demand forecasting.

Consumer Dietary & Partner Analysis

Segment	Revenue	Market Share
Vegetarian	₹3,38,28,245	64%
Non-Vegetarian	₹1,91,84,261	36%

Merchant Hierarchy: tree-map analysis shows enterprise accounts KFC, McDonald's, and Pizza Hut retain the top tier of overall order density.

Geographic Performance Rankings

Rank	City	Sales
1	Bengaluru	₹54,56,798
2	Lucknow	₹31,17,360
3	Hyderabad	₹30,21,712
4	Mumbai	₹30,15,573
5	New Delhi	₹28,29,181

Bengaluru Hub Leadership: Bengaluru dominates overall market sales, with the remaining core markets presenting highly competitive performance margins across Lucknow, Hyderabad, Mumbai, and New Delhi.

This dashboard delivers a single, zero-overhead source of truth for Swiggy's regional and category-level sales performance — enabling faster, evidence-based leadership decisions.
